

Armor Technologies Corporate Overview

Privacy Protection GUARANTEED!

“Protecting customer data is much less expensive than dealing with a security breach in which records are exposed and potentially misused.”

..... (Gartner research, September 2005)

Armor Technologies

Founded in 2004, Toronto-based Armor Technologies® is the developer of the most advanced privacy protection technology that safeguards Internet users from hostile intrusions and guarantees 100% confidentiality.

ArmorWare™ is a proprietary technology that was developed to meet the needs of corporations and individuals who demand the ultimate in online security.

Financial institutions, legal and accounting firms brokerage houses, healthcare providers and private individuals rely on ArmorWare for protecting their personal banking, online transactions and the sharing of confidential client information.

Product Overview

ArmorWare is a hybrid hardware/software solution that can be run from any Intel-compatible PC simply by plugging in the USB-based Armorkey and re-booting. The application runs directly from the CD-ROM, completely bypassing the computer's hard drive. ArmorWare is flexible enough to run on almost any Intel-compatible PC with an Internet connection.

Training and Support

Armor Technologies provides a full range of support services for ArmorWare to ensure 100% customers satisfaction. Support is available to registered ArmorWare customers through the help desk and the website.
