

Armor Technologies Product Overview  
**Privacy Protection**  
**GUARANTEED!**

## ArmorWare

Introducing ArmorWare™; the most advanced Internet privacy protection technology developed by Armor Technologies®. ArmorWare safeguards Internet users from hostile intrusions and guarantees 100% confidentiality.

ArmorWare incorporates the most sophisticated technologies available to lock out unwanted intrusions and completely isolate users from malicious software (malware).

The proprietary technology was developed to meet the needs of corporations and individuals who demand the ultimate in online security.

ArmorWare is ideally suited for:

- Business professionals such as brokers, bankers, accountants, and lawyers who use the Internet for online commerce
- Computer enthusiasts engaged in online gaming
- Government organizations that must comply with strict security regulations when sharing information
- Individuals who regularly use their computer for personal banking, online transactions, and the exchange of personal and confidential information

## How It Works

ArmorWare is a ready-to-use, plug-and-play system built on a read-only self-contained platform. It functions independently from any software or operating system currently loaded on the user's computer. ArmorWare does not access or write any data to the hard drive and requires no additional hardware/software installation or configuration.

To run ArmorWare users simply plug in the USB-based Armorkey into any Intel-compatible PC and re-boot their system. ArmorWare runs directly from the CD-ROM and completely bypasses the computer's hard drive. It can run on practically any computer that has an Internet connection.

The pre-configured firewall secures all ports; locking out external threats. All Internet traffic is forwarded through ArmorWare's secure channel, which encrypts the data along the way to prevent the monitoring of Internet activity.

When privacy protection is no longer a concern the user simply removes the Armorkey and CD-ROM and re-boots. Any temporary files such as cookies and other tracking methods are completely and permanently destroyed.

For absolute security, only the password holder can access the data on the Armorkey. Armor Technologies cannot retrieve data or reset forgotten passwords.

## Features

**Armorkey:** This removable USB-based key stores private and confidential data outside of the computer hard drive.

**Armorshred:** This file deletion tool overwrites files 35 times - five times more than the recognized industry standard.

**Armorwall:** This pre-configured firewall automatically secures all ports locking out unwanted intrusions.

**Armorchannel:** Provides a secure Internet connection that prevents hackers from monitoring Internet traffic.

**Armormail\*:** Allows users to send and receive fully encrypted email messages.

**Armorencrypt:** Automatically encrypts files and documents using one of the strongest encryption technologies available (4096-bit file encryption).

**Armorvault\*:** Stores encrypted data within the Armorkey to which only the password holder can gain access.

**Armorvault—Remote\*:** This remote storage facility for encrypted data provides authorized users with access to their archived data from anywhere in the world. Only the password holder can gain access.

\*Note: Armormail and Armorvault utilize Armorencrypt, ArmorWare's automatic encryption technology

## About Armor Technologies

Founded in 2004, Toronto-based Armor Technologies is the developer of the most advanced privacy protection technology that safeguards Internet users from hostile intrusions and guarantees 100% confidentiality.

ArmorWare is a proprietary technology that was developed to meet the needs of corporations and individuals who demand the ultimate in online security. Financial institutions, accounting firms, legal practices, brokerage houses, healthcare providers and private individuals all rely on ArmorWare for protecting their personal banking, online transactions and the sharing of confidential client information with colleagues.

## Benefits

- 100% sterile environment
- Freedom from viruses, adware, spyware, hackers and other sources of potential security breaches
- Automatic data encryption in Armorvault storage
- Fully encrypted email communications
- Pre-configured firewall that locks out unwanted intrusions
- Eliminates unique computer fingerprint while browsing
- Private and secure connection from any location in the world
- 100% private Internet experience
- Ironclad money-back guarantee

## Technical Specifications

The minimum hardware configuration for ArmorWare is:

- Intel-compatible PC 350 MHz chip
- 256 Mb of RAM (512 Mb recommended)
- 24X CD-ROM drive
- Internet connection
- Available USB port

## Ironclad Money-Back Guarantee

Armor Technologies guarantees that viruses, Trojan horses, keylogger software and spyware will not compromise your computer while using ArmorWare as directed.

Armor Technologies' ironclad money-back guarantee includes an ArmorReward of \$10,000.00 for any user that has had their computers compromised while using ArmorWare.
